

Cardboard bicycle can be built for less than \$15

It was a little over a month ago that Dutch stroller manufacturer [Joolz](#) began giving its cardboard packaging a new lease of life as chairs and lamps, and now Israeli entrepreneur Izhar Gafni has demonstrated just how versatile the material can be. In fact, Gafni has built a working [bicycle](#) entirely out of recycled cardboard for a production cost of less than USD 15.

We've already seen [bamboo bikes](#), of course, but Gafni's prototype uses recycled cardboard instead and is [reportedly](#) designed to accommodate up to 300 pounds. Besides costing very little to produce – between USD 9 and USD 12 per unit, to be specific – the device is also durable, eco-friendly, lightweight and easily carried. Perhaps best of all for those in urban settings is that there will presumably be a reduced chance of it being stolen compared to pricier alternatives. The video below explains the premise in more detail:

Gafni is currently looking for investors for his project, according to a Newsgeek [report](#). Eco-minded and transportation entrepreneurs: one to get involved in?
