AI TOOL TURNS COMPLICATED LEGAL CONTRACTS INTO SIMPLE VISUAL CHARTS

 WORK & LIFESTYLE

Beagle is an AI-powered tool that translates contracts from elusive legal language into comprehensive visual summaries.

We have seen a host of work related apps that aim to make tedious office tasks more approachable — there is a [plugin](#) that can find files without knowing the title, and a [tracking tool](#) which analyzes competitors online strategies. Joining this is [Beagle](#), an intelligent contract analysis tool which provides users with a graphical summary of lengthy documents in seconds. It is a time-saving tool which translates complicated documents from elusive legal language into comprehensive visual summaries.

The Beagle system is powered by self-learning artificial intelligence which learns the client's preferences and adapts accordingly. Users begin by dropping a file into the app. The AI — trained by lawyers and NLP experts — then converts the information into a single page document. It processes the contract at a rate of one page per 0.05 seconds and highlights key information, displaying it in easy to read graphs and charts. The system also comes with built-in collaboration tools so multiple users can edit and export the files.

What other time-consuming work tasks could be made more efficient by artificial intelligence systems?
