Takeaway:

Natural dyes are difficult to produce at the scale needed for the global fashion industry, which is why chemical-heavy colours remain so common. Now, as innovators pursue ideas for cleaning up the industry as a whole – from waterless dyeing to air drying and bacteria-cleaned wastewater

SIGN IN

of potential solutions may be growing large enough to be sustainable. Technologies, which don't require any substantial alterations to be made for the manufacturer to adopt them, are key. It is now becoming easier and quicker than ever for textile companies to make significant moves towards more sustainable practices.
