Takeaway:

In recent years, the issue of acoustic pollution has been growing steadily in importance. As our world becomes increasingly industrialised and urbanised, more and more people are being exposed to noise levels that can cause a variety of health problems. Research has shown

SIGN IN

posure to loud noise can lead to hearing loss, high blood pressure, and even heart
unfortunately, the problem is only getting worse; a recent study found that noise
pollution has increased by 10 per cent over the past decade.
