

Mobile app helps cyclists compile key facts in the event of a crash

[Add / Remove](#)

Much the way State Farm's [Pocket Agent](#) app helps drivers deal with the aftermath of an auto accident, so a new counterpart from New York Bike Lawyers – [Flanzig and Flanzig](#) – helps bicyclists do much the same thing. Specifically, the firm's new [Bike Crash Kit](#) app aims to make it easy for cyclists to accurately record all the information they need at the scene of a two-wheeled crash.

Available for free for both [Android](#) and [iPhone](#), the Bike Crash Kit is designed to help cyclists gather all the necessary data after a bicycle crash. Specifically, it prompts them to get the driver and vehicle owner's name, insurance information, witness information, responding police officer's name, report number, and precinct. Featuring utilities such as a camera, voice recorder, text notepad and drawing pad, it will also geo-tag the accident location, assist in taking photos of the accident scene and vehicles, record witness statements, and offer a sketch pad to diagram vehicle and cycle movement before and after the crash. If the accident involves a vehicle blocking a bike lane or was caused by a street defect such as a pothole, that underlying problem can also be documented using the app via photo or sketch. Finally, the app compiles crash data in an organized format that can be easily e-mailed to the police department or other relevant organizations.

Included in the Bike Crash Kit app there are also a wealth of facts for cyclists to know both before and after a crash and a brief introduction to Flanzig and Flanzig, including a link to its website. Legal entrepreneurs in the rest of the cycling world: time to create something similar as a [brand butler](#) for your own potential clients?
